Cape Peninsula University of Technology

FACULTY OF INFORMATICS & DESIGN

DIPLOMA IN INFORMATION & COMMUNICATION TECHNOLOGY

PROJECT PRESENTATION – PRP372S

GROUP ASSIGNMENT: AGILE TEAM CHARTER

CLASS: GROUP 3D

DUE DATE: 04 MAY 2026

Group Members	**ACHMAT IMAAN: 230458971** **CEZA SABELO: 220094489** **DIPUDI ZACHARIA: 230700659** **DLAMINI CHARMAINE: 222056401** **WENDY BAYISE: 222828978**
Course Code	**PRP372S**

Agile Team Charter

1. Team Purpose & Vision

Why do we exist as a team?

We exist to design and develop a solution that addresses the lack of convenient laundry access for residents in Maitland, Observatory, and Woodstock.

- **Team mission:**
  To create a reliable and affordable laundry pick-up and drop-off service that saves time, reduces effort, and improves the daily lives of residents.

  We are solving the problem of inconvenient and inaccessible laundry services for working adults with busy schedules, elderly residents who struggle with physical tasks, and people living in apartments without laundry facilities.

- **Success definition:**
  We will be successful when our final product is:
  - Fully developed and functional.
  - The solution clearly addresses the problem people are facing.
  - The system is usable, practical and meets user needs.

- **Product / Service:**
  We are responsible for delivering a laundry pick-up and drop-off service that includes:
  - Booking system
  - Laundry collection and delivery process
  - Integration with laundromat owners
  - Affordable prices
  - Convenient scheduling

---

2. Team Members & Roles

Who is on the team and how do we contribute?

Name	Role	Key Responsibilities
Imaan Achmat	Product Owner	The Product Owner comes up with the main idea, keeps the backlog organised and decides what should be done first. Their main focus is making sure that the team builds something useful that people actually need.
Sabelo Ceza	Agile Lead	The main responsibility is to keep the team organized and make sure that everyone knows what to work on. An Agile leader also leads meetings in a clear way so no one feels confused, helps solve problems when the team encounters one, and makes sure everyone stays on track and works well together.
Zacharia Dipudi	UI/UX Designer	The UI/UX Designer makes sure the app is simple and easy to use. The designer plans how users will move through the app and design screens that make sense before coding starts. The main goal is to make the navigation of the app smooth so that users do not get confused or stuck.
Charmaine Dlamini	Developer / Analyst / Tester	The main responsibility is to build the system and make sure the code works perfectly. They also help decide how things should work in a simple and proper way, tests the features of the system to make sure everything runs smoothly, and fixes any bugs when something breaks.

---

3. Ways of Working

How we work together day to day

3.1 Agile Framework

- Our team follows the Agile methodology. We use a product backlog to list and prioritise tasks, and a logbook to track task progress, updates, and team contributions.

3.2 Ceremonies

Ceremony	Frequency	Purpose
Daily Stand-up	Every working day	Team members share what they completed, what they are working on, and any challenges or obstacles they are facing
Planning	Once a week	Plan upcoming tasks, assign responsibilities, and set priorities for the week
Review / Demo	End of each milestone or sprint	Show completed tasks and gather feedback from the team members
Retrospective	After each milestone or sprint	Reflect on what went well, challenges faced, and how the team can improve.

---

4. Working Agreements

Rules we agree to follow as a team

- We show up prepared and on time.
- We respect timeboxes and deadlines.
- We give constructive feedback respectfully.
- We raise challenges early to avoid delays.
- We commit to continuous improvement.
- We communicate regularly through group chat or meetings.
- We complete assigned tasks before deadlines.
- We support each other when challenges arise.
- We keep the project files and documentation updated.
- We check our work after completing tasks to make sure everything aligns.

---

5. Communication

How and when we communicate

- **Primary channels:**

Microsoft Teams - which is used for regular meetings, quick updates, daily standups and when the agenda of the meeting requires screen sharing.

WhatsApp – which is to be used for urgent messages and frequent communication with one another.
Email – which can be used for formal communication, reports, and document sharing.

- **Response-time expectations:**
  During **core hours** (08:00 – 17:00, Monday - Friday), messages should be responded to within 1–2 hours.

  Urgent messages (those marked with an urgent label or sent via WhatsApp) must have responses given within 30 minutes after the message was sent.

  Non-urgent communication may have responses supplied within 12 hours after receipt.

- **Remote / hybrid norms:**
  Team members should be available online during core hours.

  Cameras on during important meetings but optional for casual check-ins.

  Clear status updates (e.g., *available, busy, offline*) must be maintained on Teams.
  If not available, let the team know ahead of time

---

6. Decision-Making

How decisions are made

- ☐ Consensus
- ☐ Team vote

The team will aim for consensus where possible. If an agreement cannot be reached, a majority vote will be used to make the final decision.

Escalation path if we're stuck:

- Discuss the issues as a team
- Revisit our project goals
- Seek guidance from our lecturer if needed

7. Definition of Done (DoD)

When is work really “done”?

- When the application is fully developed and working as intended.
- When the application clearly addresses the problem it was designed to solve.
- When the application is usable, practical, and meets user needs.
- When all tests have been completed successfully and the system runs without errors.
- When the project documentation is updated.
- When the Product Owner has approved the work.
- When the system/application is deployed to the agreed environment..
- When there are no critical bugs or issues found.

---

8. Core Values & Behaviours

How we treat each other

- **Respect** - Every team member is treated with dignity, we will listen to others’ opinions and value contributions made by everyone regardless of their role.
- **Transparency** - We communicate in an open and honest manner and we are transparent in the sharing of information. This allows us to keep all team members informed regarding decisions made and progress made.
- **Accountability** - We are accountable for completing our tasks, meeting deadlines, and accepting/owning all our successes and failures.
- **Trust** - We trust each other to perform our work, to help one another, and to provide a safe work environment for all team members so that all can confidently share ideas.
- **Learning mindset** - We remain open-minded regarding feedback from others, we will constantly strive to Improve upon the skills that we possess, and we will always look at the challenges and mistakes that we make as opportunities to learn and grow.
- **Collaboration** – We work together as a team, sharing ideas and supporting one another to achieve our project goals. We believe that combining our strengths leads to better results.

---

9. Risks & Constraints

What could impact our success?

Known risks:

- Team members may miss deadlines due to academic workload.
- Miscommunication between team members may cause confusion.
- Technical issues or bugs may delay development.
- Team members may have conflicting schedules for meetings or collaboration.
- Delayed tasks may affect the overall project timeline and progress.
- Lack of user feedback could affect the quality of the final product.

Dependencies:

- Availability and commitment of all team members to complete assigned tasks
- Access to reliable internet and development tools (e.g. IDEs, GitHub, database tools)
- Access to a working database and hosting platform for the system
- Timely feedback from users or test participants to improve the system
- Lecturer guidance and approval at different stages of the project

Constraints (time, budget, tools, skills):

- Limited time due to academic schedule and other module deadlines
- No budget, meaning reliance on free tools and platforms
- Limited access to advanced development tools
- Varying skill levels within the team (some members are still learning certain technologies)
- Dependence on free hosting or university resources which may have restrictions

---

10. Review & Improvement

Keeping the charter alive

- Charter reviewed every:
  ☐ Retrospective

Our team will review and update the charter during retrospectives to ensure it remains relevant and aligned with our project progress.

- Last updated: 04 May 2026

---

11. Goals and Milestones

SMART Goals

- Develop a user-friendly laundry pick-up and drop-off service platform that allows customers to book services, schedule pickups, and track orders before the end of the project timeline.
- Ensure that our app is affordable and practical for residents by focusing on convenience and accessibility.
- Test the app properly before deployment to make sure all features work correctly and users can navigate the system easily.
- Complete all planned project tasks within the given project timeline and contribute effectively as a team throughout the development process.

Project Milestones

Milestone	**Description**	**Target Date**
Project Planning	Define project scope, goals, requirements, and team responsibilities	Week 1
Requirements Gathering	Conduct research and gather user and business requirements	Week 2
UI/UX Design	Create wireframes, interface designs, and user navigation flow	Week 3
Coding/Implementation	Begin developing the core system structure, screens, and basic functionality	Week 4
Database Design & Setup	Design and create the database structure for customers, bookings, and deliveries	Week 5
System Integration	Integrate frontend, backend, and database components	Week 6

Testing & Bug Fixing	Perform functionality testing and resolve identified issues	Week 7
Final Review & Deployment	Prepare final system, documentation, and presentation	Week 8

12. Team Commitment

Our agreement to this charter

By working on this team, we commit to the principles and agreements outlined above.

Name	**Signature/Agreement**
Imaan Achmat	I.Achmat
Sabelo Ceza	S.Ceza
Charmaine Dlamini	C.Dlamini
Zacharia Dipudi	Z.Dipudi
